PUB TYPE	Numerical/Quantitative Data (110) -- Reports - Descriptive (141)
EDRS PRICE	MF01/PC05 Plus Postage.
DESCRIPTORS	Dropout Rate; *Dropouts; High Schools; *Minority Groups; *Racial Differences; School Districts; Student Characteristics
IDENTIFIERS	*Oregon

ABSTRACT

Oregon school districts are required to report to the state Department of Education students who are identified as dropouts. Information is reported on each such student that makes it possible to describe dropouts with respect to several characteristics. The Department of Education summarizes these reports for grades 9 through 12 at school, district, county, and state levels. The state dropout rate for 1998-1999 was 6.59%, and the synthetic 4-year dropout rate for 1998-1999 was 21.70%. This is the third year of reporting under the state's new dropout definition. The dropout rate for Hispanic students was more than double the overall statewide rate, and Asian/Pacific Islander students continued to have the lowest dropout rate. A primary reason students drop out is a deficiency in credits toward a high school diploma. About one quarter of the dropouts had been enrolled in the school district for 1 year or less. The reasons most often cited for leaving were being too far behind in credits to catch up, working more than 15 hours a week, having a dysfunctional home life, lack of parental support, frequent discipline referrals, substance abuse, and pregnancy or early parenthood. The historic relationship between the statewide unemployment rate and the percent of juniors and seniors who withdraw from school suggests that the availability of jobs has a strong influence on the dropout rate. Executive Summary

Oregon school districts are required to report to the Department of Education students who are identified as dropouts, as defined in statute (ORS 339.505). Briefly, a dropout is a student who withdraws from school without receiving a high school diploma, GED Certificate, or modified diploma, or transferring to another school. A variety of information is provided on each student. This makes it possible to describe dropouts with respect to several characteristics.

The Department of Education summarizes these reports on dropouts in grades 9 through 12 at the school, district, county and state levels. In summary, the statewide annual dropout rate was 6.59 percent in the 1998-99 academic year. The synthetic four-year dropout rate for 1998-99 was 21.70 percent. This is the third year of reporting under the new dropout definition enacted by the 1997 Legislative Assembly. Previously, dropouts included students who had obtained a GED certificate.

Additional findings include the following:

- The dropout rate for Hispanic students is more than double the overall statewide rate.
- Asian/Pacific Islanders continued to have the lowest dropout rate.
- A primary reason students report for dropping out is significant deficiency in credits toward a high school diploma.
- About one quarter of dropouts were enrolled in the school district one year or less.
- Eight percent of the dropouts attended four years of high school but did not meet graduation requirements and did not return in the fall.
- Reasons for leaving most often cited include: too far behind in credits to catch up, working more than 15 hours a week, dysfunctional home life, lack of parental support for education, frequent discipline referrals, substance abuse, and pregnant or student parent.
- The historic relationship between the statewide unemployment rate and the percent of juniors and seniors who withdraw from school suggests that the availability of jobs has a strong influence on the dropout rate.

INTRODUCTION

This is the eighth annual report on dropouts in Oregon schools published by the Oregon Department of Education since a law (ORS 339.505 to 339.520) establishing the report was passed by the 1991 Legislature. This report presents dropout rates for students who left school from grades 7-12 between July 1, 1998, and June 30, 1999, by school, district, and county, along with a statistical profile for students who dropped out of grades 9-12.

The dropout report was established to provide the state with a uniform and accurate system of accounting for students who leave school before graduating. The report presents dropout rates for each regular or alternative high school that awards a diploma, and rates for regular elementary, middle, and junior high schools offering grades 7 and 8. Demographic data on the dropout population, circumstances surrounding their withdrawal, and factors influencing the decision to drop out are also presented.

In earlier decades a high school diploma was an important credential, but not a necessary one for individuals who wished to have a career and a family and to participate fully in American life. That has changed. A high school diploma is now a minimum credential, and the Certificate of Initial Mastery and Certificate of Advanced Mastery, along with schooling or other training beyond high school, are a necessary part of becoming an effective participant in the world today. It is therefore of great importance that students complete their secondary education. For those that do not, we need to know who they are and their reasons for leaving so we may develop effective strategies for keeping all our children in school.

This report is part of that effort, presenting the facts so that an informed dialogue can be had in every community. It is not meant to stamp the label of "dropout" on any individual, or measure what happens to students in future years. The report does provide a profile of students at the school, district, county, and state level so that trends can be identified and strategies implemented to help students be more successful in school.

Students do not drop out at one particular time, but throughout the school year. An annual report cannot assess an ongoing problem in such a way that action can be taken when it is needed in every case. For this reason, the Department encourages districts, schools, and interested parties to use the information gathered in this report as a starting point for building their own dropout information system, and to use that system to make periodic reports to administrators, school board members, and the community throughout the school year.

Who is a dropout?

A dropout is a student who withdrew from school and did not graduate or transfer to another school that leads to graduation. Dropouts do not include students who:

- are deceased,
- are being home schooled,
- are enrolled in an alternative school or hospital education program,
- are enrolled in a juvenile detention facility,
- are enrolled in a foreign exchange program,
- are temporarily absent because of suspension, a family emergency, or severe health problems that prevent attendance at school,
- received a GED certificate,
- received an adult high school diploma from a community college, or
- received a modified diploma.

Rules developed by the Department ensure a complete accounting of students who drop out during the school year, as well as students who drop out between school years. Oregon's dropout reporting procedures are in full agreement with the procedures developed by the National Center for Education Statistics for uniform and comparable reporting of dropout rates by the states. For more information on which students become dropouts, see the Oregon Dropout Reporting Manual 1999 at http://www.ode.state.or.us/stats/index.htm.

Oregon's Dropout Rate

Three types of dropout rates can be calculated: event, status, and cohort rates. Each rate tells us something different about who dropped out. Oregon law prescribes an event rate, which measures the proportion of students who drop out in a single year without completing high school. Event rates show how many students leave high school each year and how each year's rates compare with previous ones.

A status rate measures a group of people in a given age range to see how many are dropouts, regardless of when they dropped out. Federal census surveys use an age range of 16 to 24. This rate shows how many people in that age range might need further training or education. Status rates are published at the national level by the National Center for Education Statistics.

A cohort rate starts with a defined set of students, and measures how many drop out within a specified time. It would show, for example, if we started with ninth-graders, how many of them dropped out over a four-year period. Status rates and cohort rates are not calculated in Oregon.

The data used to compute Oregon's event rate is also used to compute a synthetic four-year rate. To calculate this rate, one year of data for four classes is treated as if it were four years of data for one class. This rate is close to being a cohort rate, but since it is not actually based on four years of data, it is referred to as a synthetic rate. The four-year synthetic dropout rate is calculated at the school level only for regular high schools. At the district, county, and state levels, only data from regular high schools is used. Because students in alternative high schools are not enrolling for a four-year program, data from those schools is not used in any four-year synthetic dropout rate computation.

Event rates and synthetic four-year rates by school, district, and county for grades 9-12 in 1998-99 are displayed in table A1. A description of how these rates are calculated is found on page 14.

Table 1 – Dropouts and dropout rates, grades 9-12, by background characteristics: 1998-99

Characteristic	Dropout Rate (percent)	Number of dropouts	Percent of all dropouts
Total	6.59	10,622	100.0

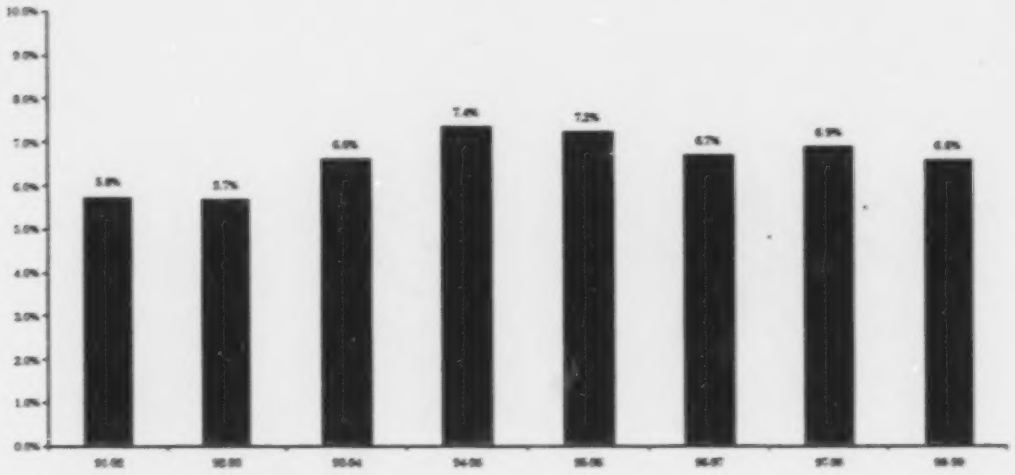
Figure 1 – Annual dropout rates From Grades 9-12 In Oregon Public Schools: 1991-92 to 1998-99



Note: Beginning with 1996-97, GED recipients were not counted as dropouts.

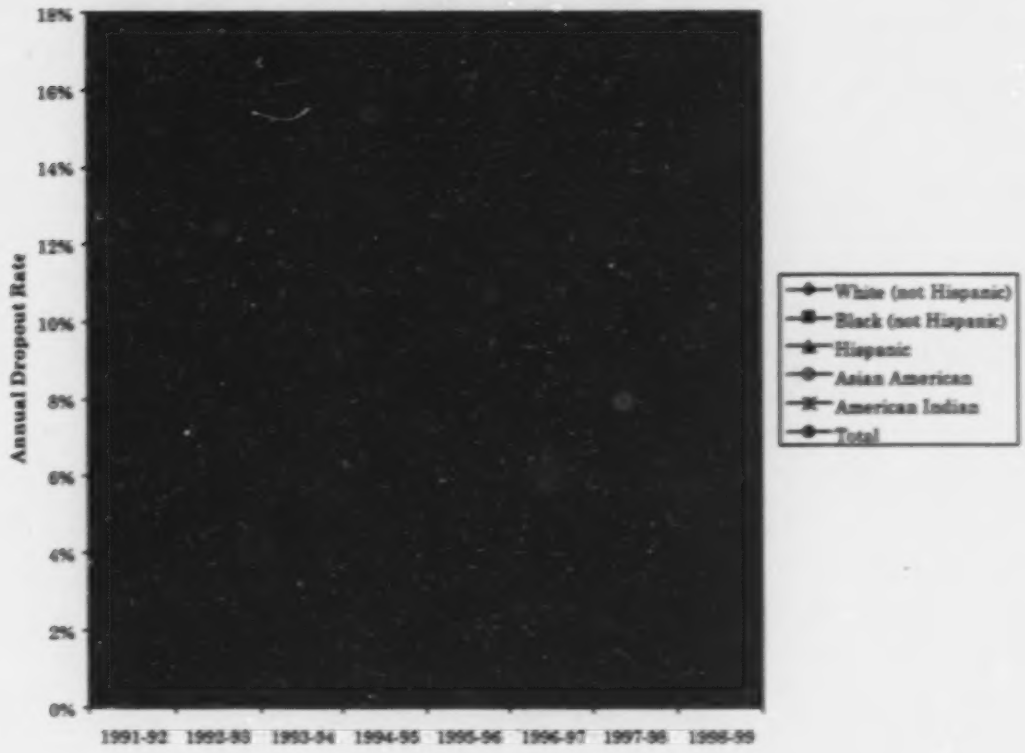
The 1998-99 dropout rate for grades K-12 was 6.59%. This is a decrease from the rate of 6.91% reported a year earlier. Since students who received a GED certificate were no longer counted as dropouts beginning in 1996-97, it is suggested that that year be used as a new baseline for making comparisons of dropout rates over time. The four-year synthetic dropout rate based on 1998-99 data is 21.70 percent, down from 23.38 percent in 1997-98.

Race/Ethnicity

Dropout rates by race/ethnicity show persistent differences among groups (figure 2). Hispanic students have the highest dropout rate of any of the five federal racial/ethnic groups. Their 1998-99 dropout rate of 14.88 percent is over two times the state rate. This difference has held steady since dropout rates were first published in Oregon seven years ago.

Dropout rates for Black (11.14% in 1998-99) and American Indian/Alaskan Native (11.23%) students are also consistently higher than the state average, but not to the extent of the Hispanic rate. Dropout rates for White (5.74%) and Asian/Pacific Islander (5.57%) students are consistently below the state average. The detailed rates by year are shown in table A7.

Figure 2 – Dropout rates by race/ethnicity in grades 9-12: 1998-99



Oregon only calculates dropout rates by race/ethnicity at the state level, because small numbers that appear at the district and school level could result in misleading percentages being obtained.

The largest numbers of dropouts by count in the four non-White racial/ethnic groups are in the Portland 1J school district, mainly because that district is so much larger than any other district in the state. The one group for which Portland's size is not a factor is Black students. Almost 65 percent of Black high-school age students attend school in Portland 1J, and 75.0% (324 dropouts) of all Black dropouts in Oregon dropped out of Portland 1J schools or programs (table A1). The 324 Black dropouts represented 15.9% of all dropouts from Portland 1J. The districts with the next highest number of Black dropouts were Salem-Keizer 24J, Eugene 4J, and Beaverton 48J with 15 each.

High concentrations of Hispanic dropouts were found in Hood River 1, Ontario 8, Woodburn 103, McLoughlin 7, Hermiston 8, and Hillsboro 1J, where over 35% of those district's dropouts were Hispanic. The highest concentrations of American Indian/Alaskan Native dropouts were found in Madras 509J, where 63.9% of the district's dropouts were from this group, and in Lincoln County Unit, at 12.2%.

BEST COPY AVAILABLE

Asian/Pacific Islander students generally have a dropout rate that is slightly lower that the state rate. The highest concentrations of Asian/Pacific Islander dropouts were in Parkrose 3, at 15.2% of the district's dropouts, and David Douglas 40, at 12.9% of the district's dropouts.

Age and Sex

As shown in figure 3, the incidence of dropping out in the secondary grade age groups is greatest at ages – 16, 17, and 18. Over 70 percent of all dropouts from grades 9-12 were in that age range. The number of dropouts at ages 15 and 19, though smaller, is still substantial.

There were fewer girls (4,653; 43.8%) than boys (5,969; 56.2%) who dropped out, which is consistent with findings of each year in the study prior to 1998-99. Even when Census data show there are more boys than girls in this age group in the general population, it appears that boys drop out higher rates than girls do, though the difference is probably less than ten percentage points.

When age and sex are combined, other consistent patterns emerge. Boys and girls drop out in about the same numbers at ages 14 and 15, but in the next three ages, boys drop out in greater numbers than girls do. The peak ages for boys to drop out are, from highest to lowest, at age 18, 17, and 16. For girls, the peak ages are arranged differently – 17, 16, and 18. The number of dropouts declines at age 19 for both boys and girls.

Figure 3 – Dropouts From Grades 9-12, by age and sex: 1998-99

Region

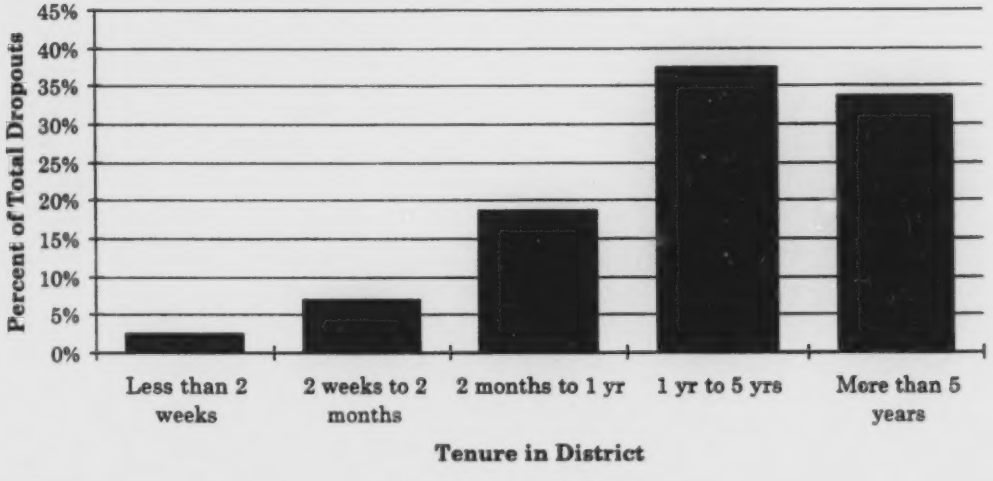
Oregon can be divided into seven regions that are linked by geography and economy. The range of dropout rates by region varies over a narrow band, from 7.28 percent in the Metro region to 5.03 percent in the Southeast region (table 1).

Mobility

Students who dropped out of high school tended to be a mobile group. Of those who dropped out, 28.5 percent were enrolled in the reporting school district for a year or less. Also, 33.8 percent of the dropouts had been in the same district for more than five years, and about 37.4 percent had been in the same district one to five years. Tenure was not reported for 0.2 percent of dropouts. In addition, 267 dropouts (2.5%) were reported as having attended three or more high schools.

High mobility may contribute to the lower than normal accumulation of credits needed for graduation by reducing the opportunity to complete classes on a regular schedule. Social integration and involvement in extracurricular activities may also be more difficult for students who move from school to school.

Figure 4 – Dropouts From Grades 9-12, by length of time enrolled in the district: 1998-99

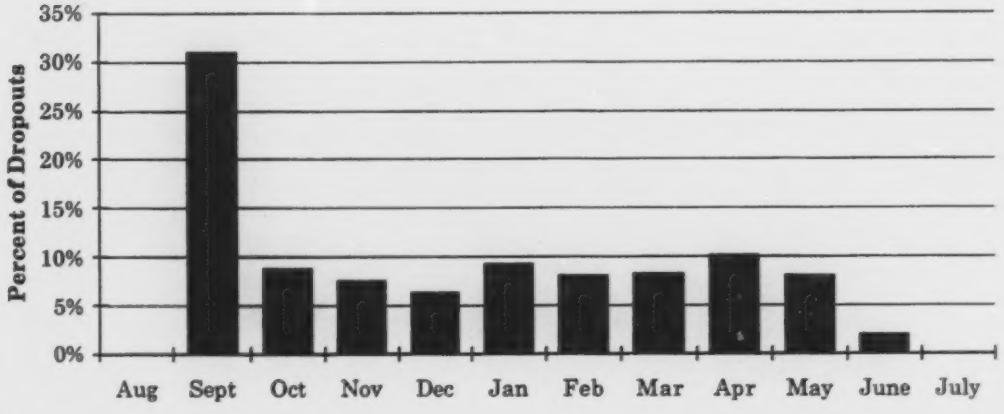


Timing

The time when the greatest number of students drop outis not during the school year, but over the summer. Almost 26 percent of students counted as dropouts for the 1998-99 school year completed the 1997-98 school year, but did not return the following fall, and never attended school in 1998-99. An additional 5 percent dropped out in the first month of school. In figure 5, the September dropout count includes summer dropouts.

The incidence of dropping out declined steadily in October, November, and December, but rose again in January, apparently after the holiday recess. Dropping out declined again in February and March, to rise once more in April, following Spring recess and the onset of good weather.

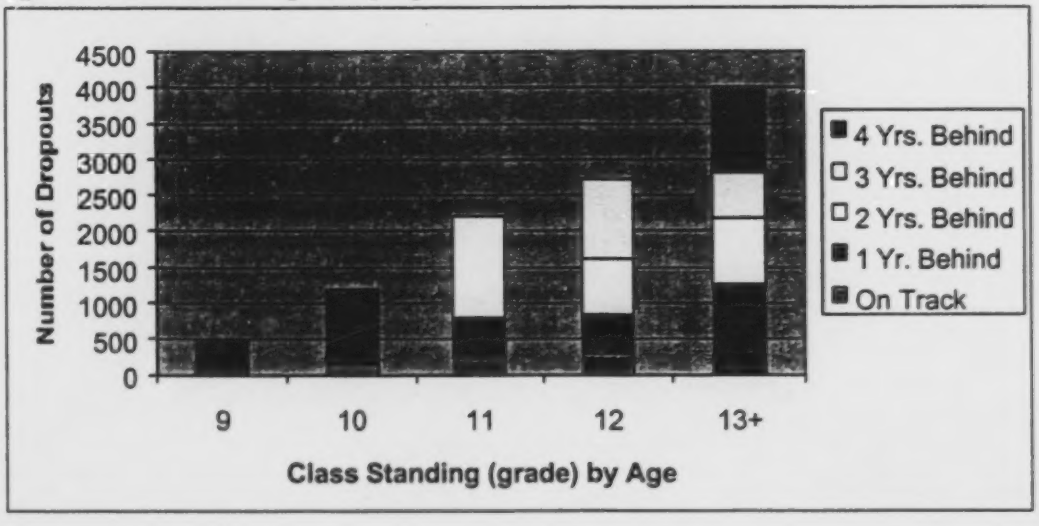
Figure 5 – Dropouts From Grades 9-12, by month: 1998-99



Credit deficiency

Class standing was assigned to dropouts in two ways: (1) the grade attained by the student according to his or her age, assuming a normal school entry age and annual grade promotions, and (2) grade placement as a percent of the required credits earned at the time the student withdrew from school (e.g., dropouts with less than 25 percent of the required credits would be classified as 9th graders, those with more than 25 percent but less than 50 percent would be classified as 10th graders, and so on).

Figure 6 – Number of Dropouts by Age and Credits Earned, Grades 9-12: 1998-99



Students were classified according to whether their class standing by credits earned was consistent with their class standing by age. If so, they are termed "on track." Students could also be classified as one to four years behind in credits required for graduation.

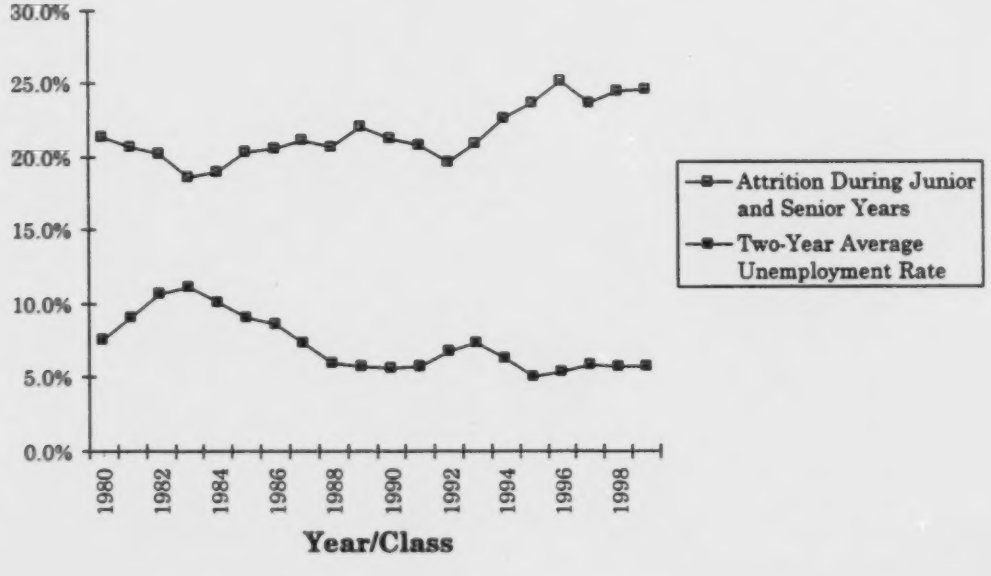
Fifty-nine percent of those who dropped out were at least old enough to be seniors, but only five percent of this group had enough credits to be regarded as seniors. Thirty-four percent of the dropouts in this age group had only enough credits for 9th grade standing. Among all dropouts, only 13 percent were classified "on track." Thirty-four percent were one year behind, 29 percent were two years behind, 15 percent were three years behind, and nine percent were four years behind

Employment

Working more than 15 hours a week was the third most frequently cited reason for leaving (table 2, page 12). This suggests that availability of jobs might be a contributing factor in Oregon's dropout rate. The chart below displays the relationship between Oregon's unemployment rate and the percentage of students who withdraw during their junior or senior years.

The withdrawal percentage is the difference between the number of 11th graders on October 1 and the number of graduates of that class two years later, divided by the October 1 count. Oregon unemployment rates are averaged over the corresponding two years.

Figure 7 – Relationship Between the Unemployment Rate and Withdrawal During the Junior and Senior Years in Oregon: 1980 to 1999



The chart suggests that in years when the statewide unemployment rate declines, the junior/senior year withdrawal rate increases, and conversely, when unemployment increases, a smaller percentage leave school without graduating. The high percentage of students who are September "no shows" might indicate a connection between employment opportunities and dropping out.

In November 1991 the Oregon Bureau of Labor and Industries issued a Report of the Child Labor Task Force. The report studied the impact of work on students. Students who worked 15 hours or more per week in jobs not connected to their course of study had lower school performance, attendance and completion rates.

Why Students Dropped Out

Students drop out for a variety of reasons, and when surveyed, cite such things as, "Didn't like school," "Was failing school," "Could not keep up with schoolwork," and "Felt I didn't belong." Oregon's dropout data collection took reasons like these and expanded them to try to find factors that influence a student to dropout of school which can be counteracted by a school offering dropout prevention programs or by changing the way it presents itself to its students.

The factors are divided into four categories: personal, school, family, and work. Responses show that the most frequently cited factors were being too far behind in credits to catch up, the lack of parental support for education, followed by students working more than 15 hours a week, having a dysfunctional home life, and not being able to "fit in" to the school setting (table 3).

The results by school are shown in table A4. Many students had no factor cited, and some students had more than one. Data for some schools was suppressed to preserve student confidentiality. Data in table A5 show statewide totals by factor by race, sex, and grade.

The comparison of factors by race (table A5) shows that among White dropouts, the most prevalent factors were, too far behind in credits to catch up, lack of parental support for education, working more than 15 hours a week, and dysfunctional home life.

Among Hispanic dropouts, the most prevalent factors were, working more than 15 hours a week, lack of parental support for education, too far behind in credits to catch up, and does not speak English well or at all.

There were significant differences between boys and girls in the reasons indicated. Girls were more frequently reported as having frequent health problems, being needed at home to take care of family members, and as pregnant or being a student parent. The responses for boys were significantly higher in other categories, most notably frequent discipline referrals, substance abuse, conflicts with school personnel, not adjusting to the school setting, and working more than 15 hours a week.

Factors that affected 9th graders disproportionately were not being able fit to into the school setting, and frequent discipline referrals. In the higher grades, working more than 15 hours a week and credit deficiency begin to have stronger effects.

Table 2 – Factors Influencing the Decision To Drop Out From Grades 9-12: 1998-99

Factor	Dropouts
Personal	
Substance abuse	700
Student felt peer pressure to not achieve, or to leave school	440
Health problems caused frequent absences	253
Does not speak English well or at all	218
Family	
Lack of parental support for education	1,304
Dysfunctional home life (parental substance abuse, parents absent, domestic violence, etc.)	1,039
Pregnant or student parent	628
Homeless	252
Needed at home to take care of family members	138
Work	
Working more than 15 hours a week	1,303
Obligations to support family	292
School	
Too far behind in credits to catch up	1,584
Could not adjust to the school setting – did not "fit in"	975
Frequent discipline referrals	761
Attended three or more high schools	267
Did not get along with one or more staff members	242
Lack of appropriate alternative education opportunities	130
Student felt unsafe at school	52

GED

In 1997, the Oregon Legislature amended the dropout reporting statute to remove students who earn a GED certificate from dropout status. Beginning with the 1996-97 Dropout Report, GED recipients were not counted as dropouts. In the reports from 1991-92 through 1995-96, students who earned a GED certificate were counted as dropouts. For this reason, the 1996-97 report established a new baseline for comparing dropout rates from year to year.

It is not possible to add back in GED recipients to the years prior to 1996-97, or to convert GED recipients to dropouts in 1996-97 and after to determine a comparable dropout rate sequence. This is because some students might now be encouraged by their school to earn a GED certificate, where they would not have earlier lest the student be counted as a dropout in this report.

The number of students earning a GED certificate from a school-sponsored setting has been reported for early leavers since 1993-94 (table 3). In the reporting years before 1996-97, receipt

of a GED was supplementary data about a dropout and was probably not reported for every dropout who earned one. The higher counts starting in 1996-97 reflect the incentive for districts to report the number of GED recipients more accurately.

Table 3. Number of students earning a school-sponsored GED: 1993-94 to 1998-99

Year	Number
1993-94	298
1994-95	320
1995-96	431
1996-97	1,181
1997-98	1,459
1998-99	1,170

Alternative High Schools

Several alternative high schools make dropout reports on their own. Only the alternative high schools who grant their own diploma are able to do this. These high schools serve students who are at high risk of dropping out, and because of this, dropout rates must be interpreted differently for alternative high schools than for regular high schools.

Students enrolled in regular high schools tend to stay in school, and drop out at expected rates, around 7 percent. Students enrolled in alternative high schools are at high risk of dropping out, or have already dropped out once. Without having the option of an alternative high school, this group of students could have a dropout rate approaching 100 percent. An alternative high school with a dropout rate of 25 percent, for example, is really changing the dropout rate for its students from nearly 100 percent to 25 percent. Seen this way, what looks like a high dropout rate is really a low one, and a sign of the program's success.

For these reasons, making comparisons of the dropout rates regular high schools with the dropout rates of alternative high schools is not recommended. Making comparisons of dropout rates between alternative high schools is also not recommended because of the different focus each school might have. The best way to evaluate the dropout rate of alternative high schools is to monitor the change in an individual school's dropout rate over time.

Alternative high schools normally have a much higher turnover than regular high schools do. To make the dropout rate reflect this condition, the denominator in the rate for alternative high schools is net enrollment over the year, rather than October 1 membership.

How Dropout Rates are Calculated

One-Year Dropout Rate

The event dropout rate for regular schools, district, counties, and the state is:

$$\frac{\text{Dropouts (July 1 – June 30)}}{\text{Membership (October 1)}} = \text{Dropout rate}$$

For alternative schools and programs, net enrollment is used for the denominator of the dropout rate formula. Net enrollment is taken over the entire school year and is:

$$E1 + E2 + R2 + R3 + R5,$$

which enrollment codes are taken from OAR 581-23-006(3)(f).

The Synthetic Four-Year Rate

The dropout reporting system collects data on students dropping out in one school year. The data for one year can be displayed as a four-year rate using the following formula.

$R = 1 - (1 - R_9)(1 - R_{10})(1 - R_{11})(1 - R_{12})$, where

- R = overall dropout rate
- R_9 = dropout rate for 9th grade
- R_{10} = dropout rate for 10th grade
- R_{11} = dropout rate for 11th grade
- R_{12} = dropout rate for 12th grade

The rate represents the proportion of the ninth-grade class that would drop out prior to graduation if that year's data on four grades in one year was really four years of data for one class.

Table 1. -- Number of non-dropouts and dropouts; dropout rates: 1998-99

School or other area	October 1, 1998 Membership	Non-dropout leavers						Dropouts				Dropout rates			
		Total	Sent to child-caring facility[1]	Deceased	Registered home schooler	Received adult high school diploma	Received GED certificate	Total	Withdrew during school year	Finished 12th grade without graduating	Did not return from summer break	1-year		4-year[2]

Note: Alternative schools and programs are listed in italics.

* Net enrollment

(1) Mental health program, juvenile detention facility, substance abuse program, or certified shelter care program.

(2) Synthetic rate based on one year of data. Four-year rates for districts, counties, and the state uses data from regular high schools only.

(3) School had too few students to calculate a four-year rate.

(4) School does not offer four grades.

(5) School is not designed for four years of attendance

(6) School did not operate.

(7) First year of reporting as a district was in 1998-99.

(8) Grades 10-12.
